

Moat Cottage, Cheshire Private Residential Home

SECTOR

Residential

BOOTH KING ROLE

Civil and structural engineer

LOCATION

Project Description

This private house and pool house provided open plan contemporary living for a young family.

Key Facts

The house satisfied demanding local planning conditions by being built from local materials. The external walls are a combination of traditional Cheshire brick and modern precast concrete brick faced lintels to create the relief on the elevations.

The open plan interior spaces are spanned by steel beams within the thickness of the floor slab to keep the ridge height below the stipulated level.

The House was awarded the Manchester Society of Architects 'Best Residential Project.
